Mr. Baba Chitnis,
Glaxo Inc
Zebulon

28th August, 1985

ZANTAC SYRUP

The problem of microbial contamination and proliferation during use of Zantac Syrup appears to have been overcome by the addition of up to 5% w/v ethyl alcohol in the formulation given in my fax to you of 25th July 1985.

We have some further investigative work to complete to define the concentration of alcohol and we need confirmation that its inclusion in this product is medically acceptable. We will then have to set up more stability programmes which will require USA - sourced Alcohol USP XXI. Could you please arrange for me to be sent 25L of this material together with a certificate of analysis and inform me of when delivery could be expected. I will be contacting Bruce Cohen for supplies of more containers.

Regards

D. Long
